## Embedded Software Developer for Sports and Health Wearable (32-40h/week)

Connective Floors BV is looking for an embedded software developer to work on innovative wearables for the health and sports sector.

Connective Floors develops and sells the Smart Floor ([www.smartfloor.com](http://www.smartfloor.com)), a product that accurately measures human movements for sport and health use cases. The data is translated into valuable information for trainers, coaches and medical staff as well as health and care providers.

The ideal candidate will bring:

- Languages: C and MicroPython.
- 3+ years' experience in professional embedded development.
- Experience with the ESP32 platform and embedded sensors.
- Sound understanding of electronics in general, understanding of PCBs design, prototypes.
- Experienced in bringing devices to production.
- Experience with radio/HF (high frequency) is a must, (UHF) RFID is highly desired.
- Experience in startup-environments is a plus.

We offer a dynamic job at a fast growing startup with ambition to grow worldwide. Salary, amongst others, will be determined by mutual agreement.

Please send your cv to Frans Lefeber ( [frans@smartfloor.com](mailto:frans@smartfloor.com) ) .
